- Supervisor:

Mr.T. Arudchelvam

- Title of the Project:

Srilankan Traditional Food Recipes

- Introduction:

This is a traditional food making system which is a web-based application that stimulates the customers to order foods and get to know more about traditional foods in Srilanka in different cultures.

- Problem:

Srilankan cuisine has been shaped by many historical, cultural and other factors. But the problem is many of the Srilankans don't know about other cultural foods and about foods which was made by their grandparents.

- Proposed System:

Customers have to register to the system online in order to order foods, select the food items according to their preferences by looking at the manual list and food details. Then make the order. For the people who want to look at the food items, they can just visit the site and can get the menus of food in any language of Sinhala, Tamil or in English.

- Objectives:

- ✓ Develop a web-based application, to flourish business of sellers by uploading menus at no cost and lead to higher customer retention.
- ✓ To enhance the interest in traditional foods in Srilanka.
- ✓ To provide details of traditional foods in Srilanka to anyone around the world.
- ✓ To avoid people from taking bad, unhealthy foods from outside without making themselves at their home.

- Tools:

- Technology; Html, CSS, JavaScript, PHP, MySQL
- Text editor; Sublime text
- Database; phpMyAdmin
